

Presentation

JS Calendar

Jonathan Cedeño • Jon Garcia-Orad • Santiago Verdugo • Hayk Petrosyan

Steps of the project

- Functionality analysis
- Design analysis
- Creation of base structure
- Program Basic Functionality (MVP)
- Develop extras
- Design improvement

Development process

1

Creation of an board in Trello, in which each task has been assigned an ID:
F - Functionality / H - Structure / C - Design

2

Tasks that had a direct relationship were worked on in teams of 2

3

Once a feature, structure, or style was completed, it was discussed together with the entire team and added to the develop branch.

4

We evenly distribute each type of task so that the whole team learns as much as possible.

What we have learned

Date & Time

- The functionality offered by date & time for managing dates
- It's application to create a reminder with `setInterval ()`

LocalStorage

- The use of `localStorage` and how to work with it to obtain the data that we need to display or collect in each function.

Grid

- How to generate a specific Grid as needed.
- Together with Flex, we create responsive design.

Problems we faced

Clean Code Null variables Empty template errors

Organization Responsive Work drunk in develop branch

Git Hub Add event in the correct cell Make all functions dynamic

Show data of clicked event Working Hours Deleteing events

Team Work HTML base structure Different approaches

All fixed!
